### **Biotron+™ Cartridge in Aquaguard & Dr. Aquaguard Water Purifiers from Eureka Forbes**

Biotron is an innovative technology to make water more bio-permeable for nutrient transportation in to biological system. This technology creates a multiple magnetic field for water and changes the macro-cluster water molecules to micro-cluster water molecules, thus makes water more permeable in to living cells.

This science was demonstrated in different biological system including plant cells. The simple demonstration of this principle is the seed germination study. One can observe the dry seed water absorption speed (by the difference in weight even after one hour of soaking of seeds) and the speed of germination.

The availability of nutrients and minerals are very important for the growth of biological systems. Biotron enhance the healthy growth of biological system by providing the essential nutrients and minerals present in water compared to normal water.

Aquaguard & Dr. Aquaguard with Biotron technology has well demonstrated these benefits in a laboratory study and its finding are reported and published in reputed journals. Also this science is well documented in many reputed international journals and commercially implemented by Israel for Agriculture and poultry benefits as well.

We appreciate the use of Biotron technology incorporated in Aquaguard & Dr. Aquaguard to ensure the real benefits of health drinking water. We wish Eureka Forbes, the innovators for this concept of healthy drinking water the very best.
